Josiah Hertzler

2/18/2016

Included in this document are the wireframes for the Task Scheduler Project. This project is being developed as part of Pennsylvania State University's CMPSC 475 Android Programming class.
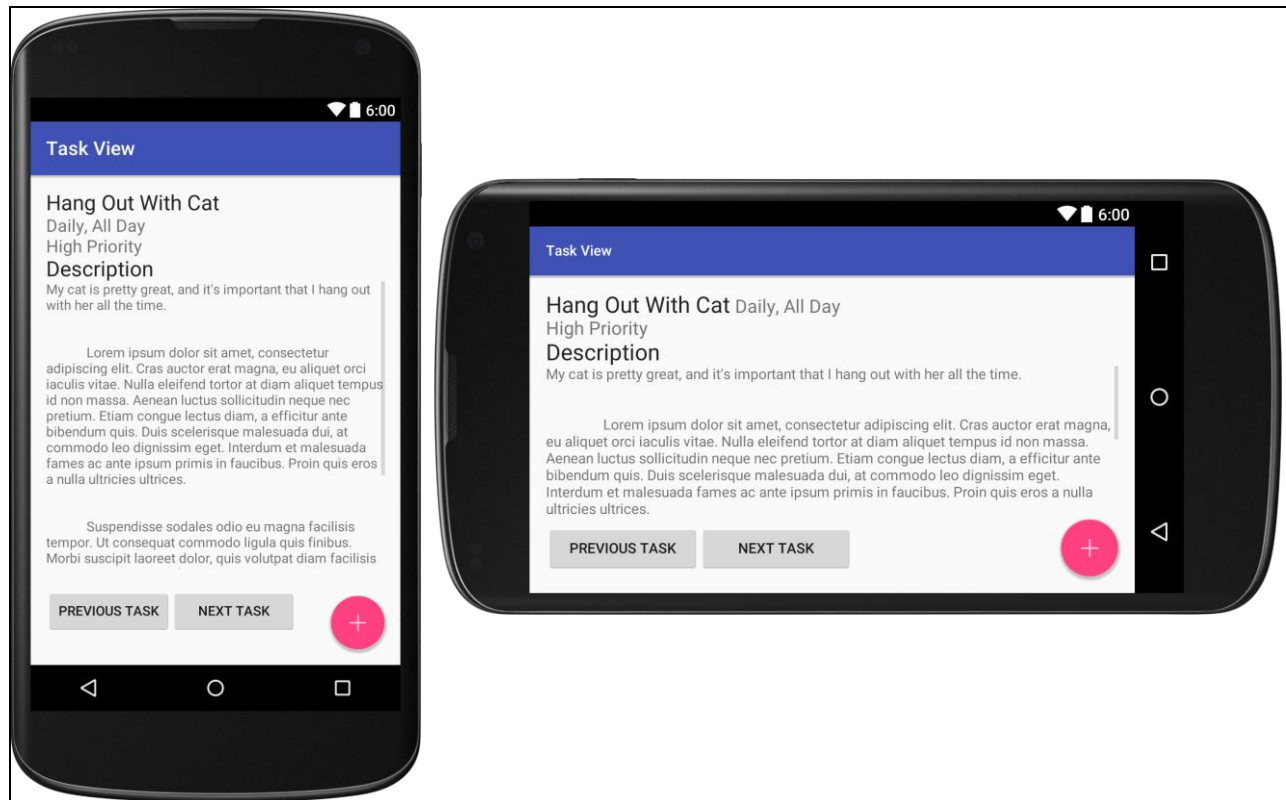

Daily Task List

The Daily Task List will include a ListView element which shall connect to the server for information on tasks to be completed for a day.
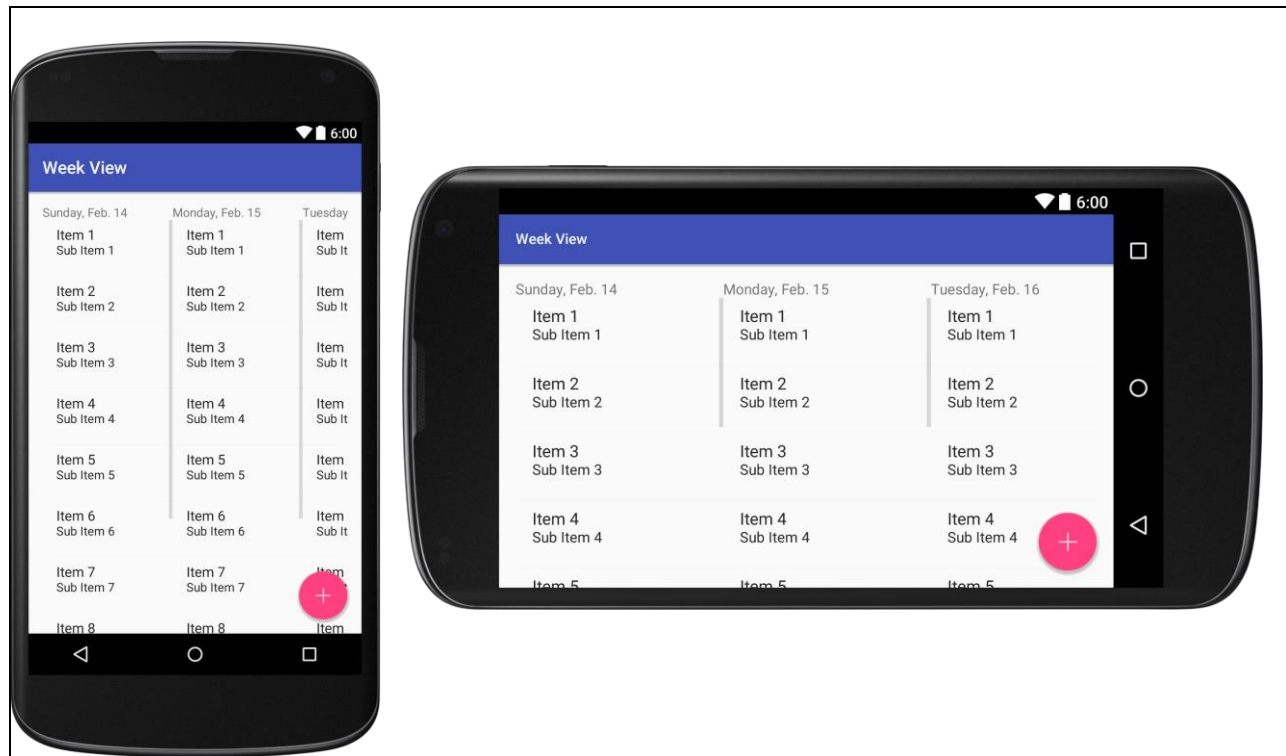

Navigation Sidebar

The Navigation Sidebar will be able to be swiped in from the left on any screen from within the app. It will appear as an overlay.
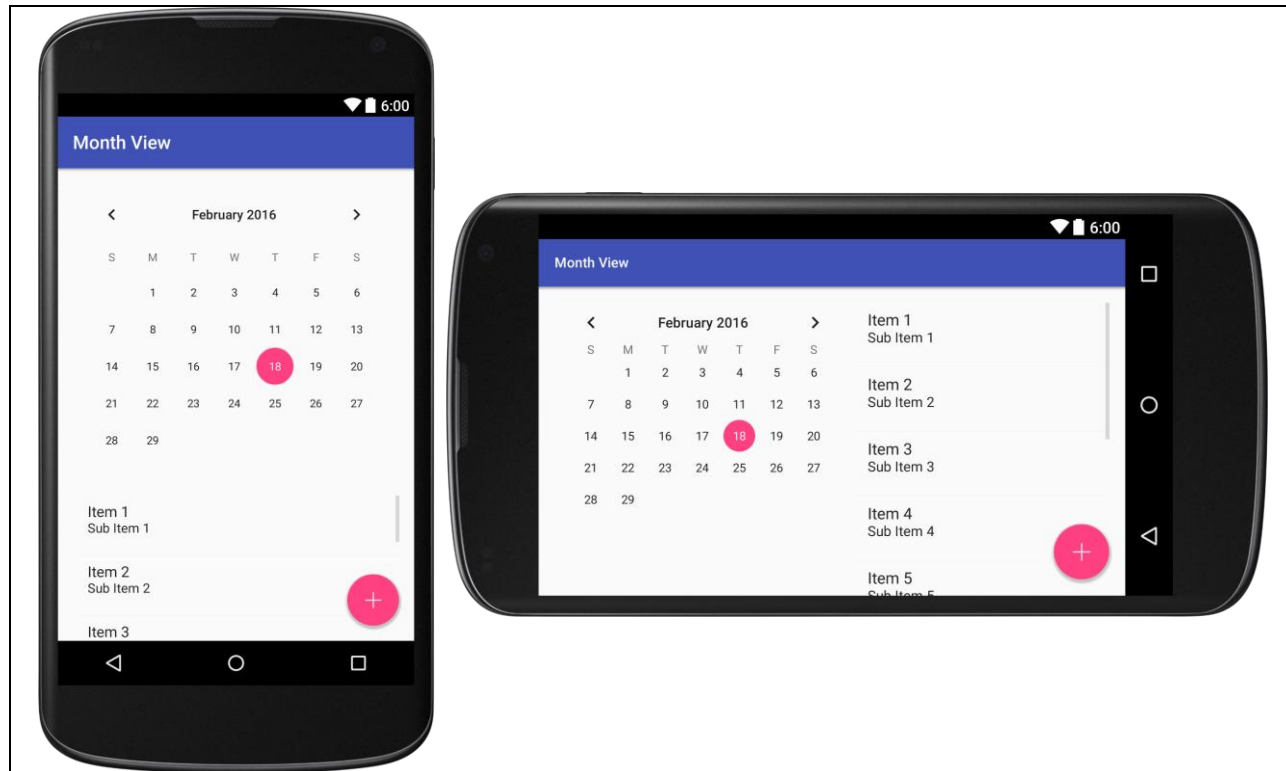

Task View

The Task View will show a selected task's details to the user and allow the user to edit or complete a task.

Week View

     The Week View will include a ListView element which shall connect to the server for information on tasks to be completed for a week.

Month View

The Month View will connect to the database and will show a few of the most important tasks for a month.

Task Edit

The Task Edit will be used to create new tasks from the daily task view and edit existing tasks from the task view.

Settings

Task Scheduler

Database Address: _____

Automatically Sync with Database: _____

SAVE
